June 2009 | aleo solar

VDE Prüfinstitut

solar module aleo S_19

The aleo S_19 solar module is characterized by the state-of-the-art processing of high grade components. 60 monocrystalline silicon cells (6 inch+ | 156 mm x 156 mm) in each module ensure excellent performance, even with limited solar irradiation. A tight output tolerance of -3%/+3% and purely positive module classification (-0 W/+4.99 W) fulfil the highest standards.

The solar cells are embedded in EVA (ethylene-vinyl acetate), which is resistant to UV radiation. The frame consists of a torsionally rigid, corrosion-resistant aluminium alloy, giving the module stability and allowing it to be mounted in a variety of configurations.

The front panel of the module consists of thermally prestressed solar glass. As well as guaranteeing high light transmittance, the glass also protects the solar cells from external weathering influences such as hail, snow and ice. A polymer backsheets guarantees good insulation and long service life.

The junction box on the back is fitted with bypass diodes to prevent individual solar cells from overheating (hot-spot effect). Several solar modules can easily be connected in series by means of two pre-fitted 1 m solar cables with solar plugs.

aleo solar modules are certified according to the European and international IEC/EN 61215 and IEC/EN 61730 standards and fulfil the criteria for protection class II. The power guarantee is at least 90% up to 10 years, and at least 80% up to 25 years, subject to the terms and conditions of the limited warranty.
